
2012 INTERNATIONAL ENERGY CONSERVATION CODE® PLAN REVIEW RECORD

Plan Review # _____
Date: _____
Valuation: _____
Fee: _____

JURISDICTION: _____
(City, County, Township, etc.)

BUILDING LOCATION: _____
(Street address)

BUILDING DESCRIPTION: _____

_____

REVIEWED BY: _____

Numerals indicated in parenthesis are applicable code sections of the 2012 *International Energy Conservation Code (IECC)*. The plan review accomplished as indicated in this record is limited to those code sections specifically identified herein. This record references commonly applicable code sections with due regard for the amount and type of detailed information which is typically found on construction documents relative to energy considerations. It does not reference all code provisions which may be applicable to specific buildings. This record is designed to be used only by those who are knowledgeable and capable of exercising competent judgement in evaluating construction documents for code compliance.

CORRECTION LIST (cont'd.)		
No.	DESCRIPTION	Code Section

PLAN REVIEW FORM NOTES: The IECC Plan Review Record is a checklist used to evaluate energy-related features of detached one- and two- family dwellings, all other Group R-2, R-4 or townhouse buildings three stories or less in height and commercial buildings. Included is the evaluation of building envelope design for adequate thermal resistance and low air leakage and the design and selection of mechanical, electrical and service water heating systems, and equipment which will promote the effective use of energy in building construction.

The form is structured by providing a general overview of the building envelope, followed by a section-by-section checklist. **Letter designations used in this form: "C" prior to the section refers to the Commercial Provisions. "R" prior to the section refers to the Residential Provisions. "CE" designates that the provisons are primarily maintained by the Commercial Energy Code Development Committee. "RE" designates that the provisons are primarily maintained by the Residential Energy Code Development Committee.**

THE BUILDING ENVELOPE

To establish compliance with the building envelope provisions of the IECC, proposed insulation levels for ceiling, wall, floor and foundation components which constitute the building envelope must be specified on the construction documents. The following table can be used to help determine how a given building envelope component should be entered in the IECC Plan Review Record.

CEILING COMPONENTS	
Ceilings	Flat ceiling Cathedral or vaulted ceilings Dormer roofs Bay window roofs Overhead portions of an interior stairway to an attic Attic hatches (more than 30 degrees from vertical, otherwise classified as walls) A-frames (8 feet above finished floor of top story)
Floors over outside air	Floors of overhangs (such as the floor above a recessed entryway or carport) Floor cantilevers Floors of an elevated home
Fenestration	Skylight and roof window assemblies
WALL COMPONENTS	
Walls	Opaque portions of above-grade walls Basement walls and kneewalls less than 50 percent below grade Peripheral edges of floors Gable end walls bounding conditioned space Dormer walls Roof or attic kneewalls Through-wall chimneys Walls of an interior stairway to an unconditioned basement Walls enclosing a mansard roof Skylight shafts
Fenestration	Windows, including basement windows (glass and non-glass glazing materials) Sliding glass doors Glass block Opaque doors, glazed doors and combination opaque/glazed doors
FLOOR AND FOUNDATION COMPONENTS	
Floors over unconditioned space	Floors over an unconditioned crawl space, basement, garage, or similar unconditioned space
Basement walls	Opaque portions of individual basement walls 50 percent or more below grade and basement kneewalls where the basement kneewall is 50 percent or more below grade. NOTE: The above-grade portion of the wall is considered a part of the basement wall where the total wall is 50 percent or more below grade
Slab edge	Perimeter edges of slab-on-grade floors
Crawl space walls	Walls of crawl spaces below uninsulated floors

ADMINISTRATION AND ENFORCEMENT (CHAPTER 1 CE, RE)

SCOPE AND GENERAL REQUIREMENTS (C101, C103, R101, R103)

RESIDENTIAL BUILDINGS
(C101.2, C202, R101.2, R202)

Detached one- or two-family dwelling _____

Group R-2, R-3, R-4 or townhouse; (three stories or less in height) _____

COMMERCIAL BUILDINGS
(C101.2, C202, R101.2, R202)

Prescriptive practice *(C401.2 Item 2, C402-C405, C406.2, C406.3, C406.4)* _____

Total Building Performance *(C401.2 Item 3, C407)* _____

ANSI/ASHRAE/IESNA 90.1 *(C401.2 Item 1)* _____

APPLICABILITY *(C101.4, C101.5, R101.4, R101.5)*

Low energy buildings *(C101.5.2, R101.5.2)*

Peak energy use < 3.4 Btu/h·ft^2 (1.0 W/ft^2) Yes/No

Unconditioned Yes/No

SUBSTANTIATING DATA
(C102, C103, C303, R102, R103, R303)

Certificate (Mandatory) *(R401.3)* _____

Materials, systems, equipment *(C303, R303)* _____

Fenestration product rating *(C303.1.3, R303.1.3)* _____

Insulation product rating *(C303.1.4, R303.1.4)* _____

Foundation insulation *(C303.2.1, R303.2.1)* _____

Information on construction documents *(C103.2, R103.2)* _____

NOTE: The review of IRC buildings as applicable in Section 101.2 of the 2012 *International Building Code* is beyond the scope of this plan review record except as specifically permitted by the 2012 *International Residential Code*.

- Heating outside a building *(C403.2.11)* _____

DUCT AND PIPING SYSTEMS (MANDATORY)

- Duct insulation/sealing *(C403.2.7)* _____
- Duct construction *(C403.2.7.1)* _____
  - Low-pressure duct systems *(C403.2.7.1.1)* _____
  - Medium-pressure duct systems *(C403.2.7.1.2)* _____
  - High-pressure duct systems *(C403.2.7.1.3)* _____
- Piping insulation *(C403.2.8, Table C403.2.8)* _____
  - Protection *(C403.2.8.1)* _____

SIMPLE HVAC SYSTEMS

The mechanical systems are unitary or packaged HVAC systems listed in Tables C403.2.3(1) - C403.2.3(8). The complex HVAC system requirements do not apply.

- Economizers *(C403.3.1)* _____
  - Design capacity *(C403.3.1.1.1)* _____
  - Control signal *(C403.3.1.1.2)* _____
  - High-limit shutoff *(C403.3.1.1.3)* _____
  - Excess outdoor air *(C403.3.1.1.4)* _____
- Hydronic system controls *(C403.3.2)* _____

COMPLEX HVAC SYSTEMS

The mechanical system is a complex HVAC system not covered in Section C403.3. The simple HVAC system requirements do not apply.

- Economizers *(C403.4.1)* _____
  - Design capacity *(C403.4.1.1)* _____
  - Maximum pressure drop *(C403.4.1.2)* _____
  - Economizer control *(C403.4.1.3)* _____
  - Economizer heating system *(C403.4.1.4)* _____
- VAV fan control *(C403.4.2)* _____
  - Static presssure sensor *(C403.4.2.1)* _____
  - Set points *(C403.4.2.2)* _____
- Hydronic system controls *(C403.4.3)* _____
- Heat rejection equipment fan controls *(C403.4.4)* _____
- Multiple zone systems *(C403.4.5)* _____
  - Single duct VAV *(C403.4.5.1)* _____
  - Dual duct and mixing VAV *(C403.4.5.2)* _____
  - Single fan dual duct and mixing VAV, economizers *(C403.4.5.3)* _____
  - Supply-air temperature reset controls *(C403.4.5.4)* _____
- Heat recovery for service water heating *(C403.4.6)* _____
- Hot gas bypass limitation *(C403.4.7)* _____

SERVICE WATER HEATING SYSTEMS (C404) (MANDATORY)

SWH equipment efficiency *(C404.2, Table C404.2)* _____

For SI: 1 foot = 304.8 mm.

a. *R*-values are minimums. *U*-factors and SHGC are maximums. When insulation is installed in a cavity which is less than the label or design thickness of the insulation, the installed *R*-value of the insulation shall not be less than the *R*-value specified in the table.

b. The fenestration *U*-factor column excludes skylights. The SHGC column applies to all glazed fenestration. Exception: Skylights may be excluded from glazed fenestration SHGC requirements in Climate Zones 1 through 3 where the SHGC for such skylights does not exceed 0.30.

c. "15/19" means R-15 continuous insulation on the interior or exterior of the home or R-19 cavity insulation at the interior of the basement wall. "15/19" shall be permitted to be met with R-13 cavity insulation on the interior of the basement wall plus R-5 continuous insulation on the interior or exterior of the home. "10/13" means R-10 continuous insulation on the interior or exterior of the home or R-13 cavity insulation at the interior of the basement wall.

d. R-5 shall be added to the required slab edge *R*-values for heated slabs. Insulation depth shall be the depth of the footing or 2 feet, whichever is less in Climate Zones 1 through 3 for heated slabs.

e. There are no SHGC requirements in the Marine Zone.

f. Basement wall insulation is not required in warm-humid locations as defined by Figure R301.1 and Table R301.1.

g. Or insulation sufficient to fill the framing cavity, R-19 minimum.

h. First value is cavity insulation, second is continuous insulation or insulated siding, so "13+5" means R-13 cavity insulation plus R-5 continuous insulation or insulated siding. If structural sheathing covers 40 percent or less of the exterior, continuous insulation *R*-value shall be permitted to be reduced by no more than R-3 in the locations where structural sheathing is used – to maintain a consistent total sheathing thickness.

i. The second *R*-value applies when more than half the insulation is on the interior of the mass wall.

TABLE R402.1.3
EQUIVALENT *U*-FACTORS[a]

CLIMATE ZONE	FENESTRATION *U*-FACTOR	SKYLIGHT *U*-FACTOR	CEILING *U*-FACTOR	FRAME WALL *U*-FACTOR	MASS WALL *U*-FACTOR[b]	FLOOR *U*-FACTOR	BASEMENT WALL *U*-FACTOR	CRAWL SPACE WALL *U*-FACTOR
1	0.50	0.75	0.035	0.082	0.197	0.064	0.360	0.477
2	0.40	0.65	0.030	0.082	0.165	0.064	0.360	0.477
3	0.35	0.55	0.030	0.057	0.098	0.047	0.091[c]	0.136
4 except Marine	0.35	0.55	0.026	0.057	0.098	0.047	0.059	0.065
5 and Marine 4	0.32	0.55	0.026	0.057	0.082	0.033	0.050	0.055
6	0.32	0.55	0.026	0.048	0.060	0.033	0.050	0.055
7 and 8	0.32	0.55	0.026	0.048	0.057	0.028	0.050	0.055

a. Nonfenestration *U*-factors shall be obtained from measurement, calculation or an approved source.

b. When more than half the insulation is on the interior, the mass wall *U*-factors shall be a maximum of 0.17 in Climate Zone 1, 0.14 in Climate Zone 2, 0.12 in Climate Zone 3, 0.087 in Climate Zone 4 except Marine, 0.065 in Climate Zone 5 and Marine 4, and 0.057 in Climate Zones 6 through 8.

c. Basement wall *U*-factor of 0.360 in warm-humid locations as defined by Figure R301.1 and Table R301.1.
